An organization can ensure that the business systems remain secure while its users reset their own passwords. Robust audit logs include information of each step of the password reset process. These logs are available from an API and enable the user to import the data into a Security Incident and Event Monitoring

Protocol is the one which is used to find the hardware address of a device (MAC Address) using its IP Address on the network. The Windows ARP tool helps to display and modify the ARP table on the system. A simple usage of arp command would be to display the ARP table: From the command prompt type, arp -a. This will display the ARP table on the
