A mirror neuron is a neuron that fires both when an animal acts and when the animal observes the same action performed by another. Thus, the neuron "mirrors" the behavior of the other, as though the observer were itself acting. Such neurons have been directly observed in human and primate species, and birds.. In humans, brain activity consistent with that of mirror neurons has

No one likes a self-absorbed person- at least most people I know don ' t. Self-absorbed people do portray certain patterns that are similar to narcissistic people, and getting close to such people can hurt your self-esteem.. However realizing certain elements that define their character can make us more prepared for dealing with them.

.
